Introduction

What is a Budget?

A budget shows what the government expects to collect as revenue, what grants it expects to receive, how much it expects to save or borrow, and what the government plans to spend on.

A budget is a document that contains details about how the government plans to spend our communal wealth – the taxpayers' money. Federal, state and local governments all have a budget document which is called an Appropriation Act.

In a democracy, every responsible citizen has the right to know how communal wealth is being expended in the delivery of public infrastructure and services.

What is a Citizens Budget?

A Citizens Budgets is a simpler, less technical version of a government's budget specifically designed to present key information that is understandable by the general public. Citizens Budgets can vary widely in focus, content, and length and be presented in a number of ways, ranging from a simple brochure to a comprehensive

report. Citizens Budgets should also be accessible by the general public, including being published online on an official state website.

Why is a Citizens Budgets Important?

Every responsible citizen has the right to know how communal wealth is being expended in the delivery of public infrastructure and services. State governments must ensure that citizens have a good understanding of how the budget directly affects their lives.

Citizens budgets foster a greater understanding of how public funds are utilized, especially if the information presented is a more accessible format than standard government budgets.

Although they are not meant to replace more detailed budget documents, they are important for informing citizens and civil society and contributes to the effort of increasing government accountability on how it manages public money.

Total Budget Expenditure: This is the total amount of budget for the given year. It is the summation of both the

Introduction

Recurrent Expenditure and Capital Expenditure as approved by the State House of Assembly and assented to by the Executive Governor.

This is how the government plans to spend, on behalf of the citizens, according to the resources it manages. Government expenditure has two main categories: Recurrent and Capital Expenditure.

Revenue: Revenue is all the amount of money the government believes it will collect during the year from recurring taxes, levies and fees; put simply, this refers to money collected on behalf of citizens. States in Nigeria receive a share of revenues collected federally such as oil revenues, corporate income taxes, VAT and excises and duties.

These are called statutory allocation, VAT and other statutory revenue in the budget are transferred to the states from the federation accounts. Revenues that state directly collect and retain for its own use

are called internally generated revenue (IGR); IGR includes personal income taxes, road taxes, property taxes etc.

Budget Deficit: This is generally the difference between what the government intend to spend on expenditures and the revenue generation capacity. A deficit occurs when the expenditure figure is higher than the revenue and grants figure. The total budget financing is the summation of all the financing the government intends to raise through borrowing/ loans (domestic and foreign), sales of government assets or other deficit financing items.

Grants: A grant is one of the government's sources of funds for

funding ideas and projects to provide public services, stimulate the economy, and benefit the general public. Grants

Introduction

Loans: Another source of funds for the government to finance the budget is a loan. Government borrows to finance its annual budget generally when revenues and grants are not enough to fund all the expenditures in the budget. Loans could be domestic and or foreign sources. Loans can be for a specific project or set of expenditures or could be used to finance the general budget expenditures.

Why does the Government borrow? When the government intends to spend more money than they expect to collect as revenue and receive in grants, the budget is in deficit.

When they intend to spend less than

What they expect to collect in revenue

and receive in grants, the budget is in surplus. A balanced budget is a budget where total revenues are equal to the total expenditures for the year.

When the budget has an expected deficit, the government will need to finance the budget deficit. It can do this through sales of government assets or through borrowing. Borrowing can be from banks, multilateral institutions, the federal government or from investors through the capital market

Recurrent Expenditure: Refers to recurring payments: wages and salaries for civil servants; overhead costs (electricity bills, purchase of diesel); consolidated revenue account charges; transfers (to local government, for example); interest payments on existing loans; and other (subsidies, for example).

Personnel Cost: include salaries, allowance and other benefits that Government pays to its workers (civil servants).

Overhead Cost: These are any regular expenses which are not paid directly to a

Introduction

civil servant or other government workers, including amounts billed directly to customers. Overheads must be paid for regularly. Examples are electricity bills, water bills, the buying diesel for generators, or the money spent on travelling during work, by civil servants.

Capital Expenditure: Capital Expenditure is money spent by government to acquire or build fixed capital assets, land or intangible assets. Capital Expenditure is how much is used for projects like the

building of schools, hospitals, roads, or buying security equipment. Capital Expenditure is sometimes called “Capex”

Sectoral Allocation: Expenditure is allocated to different ministries,

departments and agencies (MDA). Each MDA will have an approved budget of recurrent and capital expenditure as part of the overall approved state government budget

to run its daily activities as well as carry out projects associated with them respectively.

It is recommended that States include allocations for all MDAs in the template or at least the highest spending MDAs.
